

Underprivileged children present science projects

Published: October 17, 2018 [Foundation](#)

On October 13, It's Humanity Foundation (IHF), a non-profit organisation catering towards the betterment of rural and underprivileged children, organised the annual science fair-- The Joy of Innovation 2018. Title sponsor for the event was 'Amar Daraz', which is a concern of Daraz Bangladesh Limited.

It is an annual event organised every year for the children of IHF schools where they get a platform to learn and prepare for science projects to eventually present them in front of an audience. This year, besides the science projects, the children also delivered poster presentations where they raised current environmental issues and shared ideas to tackle them in order to create a sustainable world, says a press release.

The event brought together over a hundred guests to support its underlying cause. The event aimed to create a bridge among the communities of the privileged and underprivileged for a better understanding of one another. This year, Sunbeams School, Office of Co-curricular activities of BRAC University and BRAC University Natural Science Club, Community development for Peace Foundation, Kadamati Production, Shad's Kitchen and Nerdiz came forward to collaborate with IHF to make this event happen.

It's Humanity Foundation (IHF) is a non-profit organisation dedicated towards diminishing the needless human sufferings by extending opportunities to the underprivileged. Through its endeavours to build capacity in the area of education and vocational skills, IHF mandates to establish a system so that the beneficiaries, i.e. underprivileged children and their mothers - attain and sustain better opportunities in life and break the vicious cycle of ever-growing poverty.
