SUMMARY OF FINDINGS

BANGLADESH SHRIMP CULTURE PROJECT

BASELINE SURVEY 1988

Report prepared by the Research and Evaluation Division of
Bangladesh Rural Advancement Committee under agreement with
M/S. Aqua Service, Consulting Engineers in Aqua Culture, Dhaka

April 1989-

SUMMARY OF FINDINGS *

A baseline study has been done as a part of Shrimp culture project of Aqua Service SA of Sete, France, Consulting Engineers in Aqua Culture. The study was conducted in polder no. 20, 20/1 of Khulna and polder no. 66/3, 66/4 and 70 of Cox's Bazar project areas. Aqua Service is carrying out an action project to increase the production of Shrimp through the provision of improved technology. By a contract, BRAC's Research and Evaluation Division (RED) was assigned with certain tasks related to the study such as designing the questionnaires, training of interviewers, data processing and report writing.

The broad objective of the study was to generate the benchmark information about the socio-economic characteristics of the inhabitants of the project areas which would subsequently make possible the assessment of the impact of the project on the life of the people.

The following is an executive summary of the baseline study. Polderwise information of the Shrimp culture project has been appended herewith as requested by Aqua international

A. GENERAL:

- I) The present baseline study aims to generate benchmark information about the socio economic characteristics of the inhabitants of Shrimp producing areas of Cox's Bazar and Khulna. A total of 1,750 households which is approximately 30% of the total households of all the 32 sample villages were covered from both project and non project areas.

* This report presents the summary of findings of the main "Baseline Survey - 1988 of the Bangladesh Shrimp Culture Project". The main report is available in a separate volume in BRAC Library. 160

- II) The average family size in Cox's Bazar (7.3) is much higher than that in Khulna (5.7)
- III) Percentage of population below 15 years of age is very high, particularly in Cox's Bazar. About 52% of the total population in Cox's Bazar and 43.4% of the total population in Khulna is below the age of 15 years.
- IV) Percentage of population in the working age is much higher in Khulna (51%) than in Cox's Bazar (44%). Dependency ratio in Cox's Bazar is 1.29 while it is only 0.98 in Khulna.
- V) With respect to the level of literacy there are wide regional variations. Khulna has a higher literacy rate (40%) compared to Cox's Bazar (36%), both of which are higher than national average of 19.7% (BBS 1985).
- VI) Per acre yield, Per acre cost as well as Per acre Return of both crop and Shrimp are much higher in Cox's Bazar area than in Khulna. Yield, cost and Return Per acre of crop in Cox's Bazar is 1358.15 kg/ac, Tk 4529.3 & Tk 3725.5 as against 642.77 kg/ac, Tk 2434.4 & Tk 1440.8 in Khulna respectively. For Shrimp corresponding figures for Cox's Bazar are 51.28 kg/ac, Tk 5316.3 & Tk 2220 as compared to 44.89 kg/ac, Tk 3414.7 & Tk 1675 for Khulna respectively.
- VII) Production process of Shrimp, salt or crop are all very traditional in nature in all the sampled areas using traditional technology and little modern inputs.
- VIII) Shrimp production brings highest net Return in Khulna followed by crops while in Cox's Bazar highest net Return comes from crops followed by Shrimps.
- IX) At the present level of technology labour productivity is

the highest in crop followed by Shrimp in Cox's Bazar while the situation is reverse in Khulna. Output labour ratio in crop farming is 231.29 and 146.13 in Cox's Bazar and Khulna respectively. For Shrimp culture these are 217.53 and 169.89 in Cox's Bazar and Khulna. Return on investment Per taka is also the highest in crop in Cox's Bazar while it is the highest in Shrimp culture in Khulna. Output capital ratio for crop and Shrimp in Cox's Bazar is 1.82 and 1.32 while for Khulna these are 1.59 and 1.65.

- X) Thirty nine Percent of the households in Cox's Bazar and 25% of the households in Khulna do not have any land nor even the homestead land. The percentage of functionally land less household having land less than .50 acre is 42% in Cox's Bazar and 33% in Khulna.
- XI) Land distribution in both the areas is highly skewed in favour of a limited number of people. Bottom fifty percent of the households have less than 12.3% of the total land while top 10 percent control 40% to 73% of the total operational land.
- XII) Skewness in land distribution is much higher in Cox's Bazar than that in Khulna. Gini coefficients are .701 and .776 in Cox's Bazar intervention and control areas while those of Khulna are .502 and .659.
- XIII) Average net household income in Cox's Bazar (Tk 47411) is much higher than that of Khulna (Tk 23392). So is the case with the Per capita income (Tk 6504 and Tk 4111 respectively). Both average household income and Per capita income of the

- XIV) Largest portion of the household income both in Cox's Bazar (85%) and Khulna (65%) come from sources other than crop, salt or Shrimp.
- XV) The households which are involved in Shrimp cultivation has higher average net income than those which are not involved in Shrimp production.
- XVI) Very strong correlation exists between the quantity of operational land and income Per household as well as between Per capita land and Per capita income. The top landholding categories possess the highest amount of Per capita income.
- XVII) As was the case with income, average household expenditure in Cox's Bazar (Tk 5036) is more than double that of Khulna (Tk 2080). The average household expenditure made on basic household necessities is much higher in Khulna (91.4% of total) than in Cox's Bazar (62.5% of total).
- XVIII) Level of indebtedness is higher in Cox's Bazar compared to Khulna both in terms of borrowing household (55% in Cox's Bazar and 36.6% in Khulna) and average amount of credit (Tk 9925 in Cox's Bazar and Tk 3954 in Khulna). Credit market is much advanced in Cox's Bazar, but it closes to traditional one in Khulna. Lion's share of the credit are invested in Cox's Bazar (74% of total) and consumed in Khulna (64% of total credit).

B. POLDERWISE:

The baseline study aims to generate benchmark information about the socio economic characteristics of the inhabitants of Shrimp producing areas of Cox's Bazar and Khulna. A total of 1750 households

(30% of the total households of 32 sample villages) were covered from both project and non project areas.

<u>The sample size</u>		<u>No. of H.H.</u>
Cox's Bazar	Polder 66/3	479
	Polder 66/4	33
	Polder 70	520
	Control	157
Khulna	Polder 20	261
	Polder 20/1	37
	Control	264

Average family size: Average family size of polders in Cox's Bazar is higher than those in Khulna.

	<u>Average family size</u>
Cox's Bazar	7.11
	7.79
	7.68
	6.40
Khulna	6.20 (BBS 1983)
	5.69
	6.76
	5.40
District	5.90 (BBS 1985)

Sex Ratio: Sex ratio of polders in Cox's Bazar is higher than those in Khulna

Sex ratio (M/F)

Cox's Bazar	Polder 66/3	107
	Polder 66/4	111
	Polder 70	117
	Control	115
	District (Chittagong)	113 (BBS 1985)
Khulna	Polder 20	109
	Polder 20/1	94
	Control	98
	District	108 (BBS 1985)

Both in Cox's Bazar and Khulna polder areas the percentage of population below 15 years of age is very high.

% of population below
15 yrs. of age

Cox's Bazar	Polder 66/3	52.2
	Polder 66/4	56.4
	Polder 70	51.5
	Control	53.0
	District (Chittagong)	44.7 (BBS 1985)
Khulna	Polder 20	42.7
	Polder 20/1	40.8
	Control	44.6
	District	45.5 (BBS 1985)

Percentage of population falling within the working age (15-59 years) is much higher in Khulna polder areas than in Cox's Bazar polder areas.

% of Popn. within
the working age

Cox's Bazar	Polder 66/3	43.9
	Polder 66/4	40.5
	Polder 70	44.1
	Control	42.4
	District (Chittagong)	49.5 (BBS 1985)
Khulna	Polder 20	51.7
	Polder 20/1	49.6
	Control	49.6
	District	49.1 (BBS 1985)

Dependency Ratio: Dependency ratio in Cox's Bazar polder areas is higher than in Khulna polder areas.

Dependency ratio

Cox's Bazar	Polder 66/3	1.28
	Polder 66/4	1.47
	Polder 70	1.27
	Control	1.36
	District (Chittagong)	1.02 (BBS 1985)
Khulna	Polder 20	0.93
	Polder 20/1	1.01
	Control	1.01
	District	1.04 (BBS 1985)

Literacy:

There are wide regional variations with respect to level of literacy. Literacy rate is higher for Khulna polder areas than in Cox's Bazar polder areas.

			<u>Literacy rate</u>
Cox's Bazar	Polder 66/3		35.6
	Polder 66/4		28.8
	Polder 70		27.1
	Control		32.5
	District (Chittagong)		23.4 (BBS 1983)
Khulna	Polder 20		44.8
	Polder 20/1		45.2
	Control		33.9
	District		26.3 (BBS 1983)

Occupation:

Agriculture serves as the major occupation for male population in all the polder areas of both districts.

			<u>% of popn. in agriculture</u>
Cox's Bazar	Polder 66/3		23.7
	Polder 66/4		34.0
	Polder 70		24.6
	Control		24.4
	District (Chittagong)		n.a.
Khulna	Polder 20		35.7
	Polder 20/1		41.3
	Control		26.9
	District		n.a.

Participation of female population in economic activities ignoring household works and students is negligible in all the polder areas of the two districts.

Tenurial Pattern:

Average size of plot varies widely over the polders of Cox's Bazar, but it varies little over the polders of Khulna.

		<u>Average size of plot (ac.)</u>
Cox's Bazar	Polder 66/3	1.33
	Polder 66/4	1.72
	Polder 70	3.24
	Control	2.12
Khulna	Polder 20	1.71
	Polder 20/1	2.13
	Control	1.22
	Bangladesh	1.80 (BRAC, 1984)

Proportion of tenant farmer is higher in the polders of Cox's Bazar than those in Khulna.

		<u>% of households under</u>		
		<u>Owner</u>	<u>Owner-cum-</u>	<u>Tenant</u>
		<u>cultivator</u>	<u>tenant</u>	<u>farmer</u>
Cox's Bazar	Polder 66/3	33.3	25.9	40.7
	Polder 66/4	55.6	14.8	29.6
	Polder 70	19.7	38.4	41.9
	Control	25.3	31.6	40.9
	District	n.a.	n.a.	n.a.
Khulna	Polder 20	27.4	42.8	29.8
	Polder 20/1	48.7	32.4	18.9
	Control	48.9	35.1	16.1
	District	n.a.	n.a.	n.a.

Land distribution:

Distribution of operatable land is more skewed in the polder areas of Cox's Bazar than in Khulna.

		% of landless & functionally <u>landless</u>	Gini Co- efficient
Cox's Bazar	Polder 66/3	41.3	.63
	Polder 66/4	21.2	.55
	Polder 70	41.9	.74
	Control	51.6	.78
	District (Chittagong) (land occupancy survey, 1977)	23.0	n.a.
Khulna	Polder 20	25.7	.52
	Polder 20/1	00.0	.49
	Control	34.1	.66
	District (land occupancy survey, 1977)	31.0	n.a.
Bangladesh		n.a.	.75 (BRAC 1984)

Acreage, Yield and production cost of different product:

In Cox's Bazar among crop, Shrimp and salt acreage is highest for salt in polder 66/3 and 66/4 but it is highest for Shrimp in polder 70. In the polders of Khulna acreage under crop is much higher than those under Shrimp.

In Cox's Bazar yield of crop and salt does not vary much over the polders but yield of Shrimp varies tremendously. In Khulna yield of both Shrimp and crop varies considerably over the polders.

		<u>Crop</u>	<u>Yield (Kg./acre)</u>	
			<u>Shrimp</u>	<u>Salt</u>
Cox's Bazar	Polder 66/3	1241.9	137.5	18853.7
	Polder 66/4	1641.5	13.9	20182.0
	Polder 70	1140.0	34.5	19064.5
	Control	1974.0	29.5	17108.0
	District (Chittagong)	830.0 ('86-87)	44.1 ('84-85)	n.a (BBS 1987)
Khulna	Polder 20	450.9	48.8	
	Polder 20/l	766.0	30.3	
	Control	972.9	60.8	
	District	514.8 ('86-87)	50.1 ('84-85)	(BBS 1987)

Per acre cost of Shrimp culture varies considerably over different polders of Cox's Bazar and Khulna.

		<u>Per acre cost of Shrimp (Tk)</u>
Cox's Bazar	Polder 66/3	3564.2
	Polder 66/4	4900.5
	Polder 70	5769.3
	Control	5126.4
	District	n.a.
Khulna	Polder 20	3559.1
	Polder 20/l	2577.1
	Control	4389.2
	District	n.a.

Employment: On-farm employment in crop production is higher in Khulna polder areas than in Cox's Bazar. In Shrimp production employment level are comparable among the polder areas except polder 70 of Cox's Bazar. In general, on-farm employment level is higher in salt production.

		<u>On-farm employment as % of available mandays</u>		
		<u>Crop</u>	<u>Shrimp</u>	<u>Salt</u>
Cox's Bazar	Polder 66/3	7.11	14.39	30.06
	Polder 66/4	10.10	11.98	29.71
	Polder 70	9.13	54.10	35.16
	Control	8.43	127.20	23.69
	District	n.a.	n.a.	n.a.
Khulna	Polder 20	11.11	11.01	-
	Polder 20/1	15.16	18.03	-
	Control	12.68	11.23	-
	District	n.a	n.a	-

Income:

Average net income Per household in Cox's Bazar polder areas is higher than in Khulna polder areas. When imputed wage income from household labour and rental income from self operated household land are included in the net income calculation, the situation remains same as before. In between the polder areas of each district, the difference is large. Largest portion of net household income for all the polder areas come from sources other than crop, salt or Shrimp.

Average net income Per H/H (Tk)

Cox's Bazar	Polder 66/3	40922
	Polder 66/4	34350
	Polder 70	57638
	Control	36080
	District (Chittagong)	16827 (BBS 1983)
Khulna	Polder 20	22130
	Polder 20/1	51560
	Control	20692
	District	14745 (BBS 1983)

Land-Income Correlation

Strong correlation exists between the quantity of operational land and average net income Per household. The r values are highly significant in almost all the cases of the polder areas of the both districts. The top holding catagories earn higher net income Per household in almost all the polder areas.

Correlation Co-efficient (r)

Cox's Bazar	Polder 66/3	0.918 **
	Polder 66/4	0.581 *
	Polder 70	0.843 **
.	Control	0.982 **

	Polder 20/1	0.967 **
	Control	0.985 **
	District	n.a.
Bangladesh		0.96 ** (BRAC 1984

Expenditure:

As was the case with income, wide regional variation exist in average household expenditure. Household expenditure in Cox's bazar polder areas are higher than Khulna polder areas. Households of Khulna polder areas made higher expenditure on basic household necessities (92% of total) as compared to Cox's Bazar polder areas. (71.4% of total).

Monthly household expenditure (Tk)

Cox's Bazar	Polder 66/3	4239
	Polder 66/4	2694
	Polder 70	6424
	Control	5292
	District	n.a.
Khulna	Polder 20	1880
	Polder 20/1	3566
	Control	2090
	District	n.a.
Bangladesh (1983-84)		1686 (BBS, 1988)

Assets:

There exist wide variation in the value of assets owned Per household of the polder areas of the both districts. Livestock number owned Per household is higher in Khulna polder areas while poultry ownership is higher in Cox's Bazar polder areas.

Total Asset value
Per household (Tk)

Cox's Bazar	Polder 66/3	22009
	Polder 66/4	13352
	Polder 70	27216
	Control	10236

Khulna	Polder 20	11473
	Polder 20/1	29464
	Control	4994
	District	n.a.

		<u>Livestock/HH</u>	<u>Poultry/HH</u>
Cox's Bazar	Polder 66/3	1.68	8.49
	Polder 66/4	5.09	18.27
	Polder 70	0.82	12.89
	Control	1.94	7.30
	District (Chittagong) (1983-84)	2.65	7.87 (BBS 1986)
Khulna	Polder 20	4.52	6.63
	Polder 20/1	6.73	13.32
	Control	2.28	6.15
	District (1983-84)	.3.48	5.91 (BBS, 1986)

Level of Indebtedness: Level of indebtedness is higher in the polders of Cox's bazar compared to that in Khulna.

		<u>% of borrowing household</u>	<u>Average amount of borrowing Per H/H</u>
Cox's Bazar	Polder 66/3	48.9	9751.9
	Polder 66/4	30.3	2030.0
	Polder 70	60.8	11186.7
	Control	59.8	6954.3
Khulna	Polder 20	49.8	3788.9
	Polder 20/1	32.4	6766.7
	Control	24.6	3763.9
Bangladesh		40.9	2077.71 (BRAC, 1984)

Importance of various sources contributing to total borrowing varies considerably over different polders. In general friends and relatives are important as credit supplier in the polders of Cox's Bazar and money lender in Khulna. Role of money lender is

insignificant in the polders of Cox's Bazar. Average amount of credit is directly related to the importance of bank as a source of credit.

		<u>Use of credit as % of total Consumption</u>	<u>Investment</u>
Cox's Bazar	Polder 66/3	38.8	61.2
	Polder 66/4	72.4	27.6
	Polder 70	12.6	87.4
	Control	27.0	73.0
	District	n.a.	n.a.
Khulna	Polder 20	68.0	32.0
	Polder 20/1	4.4	95.6
	Control	39.4	60.6
	District	n.a.	n.a.

Lion's share of credit goes to investment in the large polders of Cox' Bazar and to consumption in the large polder of Khulna. However the opposite is observed in the two smallest polder.
