Lecturer, BRAC Business School  
BRAC University

## Letter of Transmittal

Mohammad Atiqul Basher  
Lecturer,  
BRAC Business School  
BRAC University  
66 Mohakhali, Dhaka-1212

**Subject:** Submission of the Internship Report titled “The Key Factors Influencing Talent Development in this competitive digital age and recommendations for Robi Axiata Limited”.

Dear Sir,

It is a great pleasure to present you the final internship report titled “The Key Factors Influencing Talent Development in this Competitive Digital Age and Recommendations for Robi Axiata Limited” which is required for the course BUS400.

It is my honor to work for such a leading organization of Bangladesh and gain in-depth knowledge about how their human resource department works. Through the research, I have tried my best follow your instructions and accommodate as much relevant information to make this report as informative as possible.

I sincerely hope that the report will meet the standards which you were looking for.

Sincerely yours,

---

Rafid Hasan Arnob  
16104011  
BRAC Business School  
BRAC University  
Date: January 6th, 2020

## **Non-Disclosure Agreement**

This agreement is between Robi Axiata Limited and Rafid Hasan Arnob from BRAC University to use general information about the company from their website and information and gathered during internship period from supervisors for the project “The Key Factors Influencing Talent Development in this competitive digital age and recommendations for Robi Axiata Limited” which is not disclosed anywhere rather than my project and presentation.

For this report there are no such confidential data that I am aware of as only general data was used from the website and public articles. Here I may disclose confidential Information which the company has no issues with me or my University.

The company agrees that in order to complete the course BUS400 I have to submit the report and give a detailed presentation which mainly includes general information and little to no confidential information which will be presented Infront of a small group of audience that has not signed any non-disclosure agreements. This agreement may not be modified except by written instrument signed on behalf of each party.

**Name of the company:** Robi Axiata Limited

**Supervisors Name:**

---

**Signature:**

---

**Address:**

Robi Corporate Office 53, Nafi Tower, Gulshan South Avenue Gulshan 1, Dhaka - 1212

**Name of the Student:** Rafid Hasan Arnob

**Address:**

BRAC University, 66- Mohakhali, Dhaka 1212

## **Executive Summary**

Talent Development is a vital necessity for any organization in this modern age as it can be a source of competitive advantage for the company to grow. With the advancement of technology and globalization, there are changing trends in talent development and there are new factors which are becoming more important to focus on for talent development. In this report, through primary and secondary research the key factors that influence talent development are identified and which variables are more relevant in this age are highlighted. The data for this research has been gathered through questionnaire distributed among the talent of various multinational organizations, in addition, the secondary data has been gathered from various research papers, journals and articles. Through the results of the report, data analysis is performed and recommendations are given for the organization which can be implemented to further improve the talent development process.

**Keywords:** Talent Development, Globalization, Changing Trends, Competitive Advantage.

## **Chapter 1**

### **Industry & Organization Overview**

#### **1.1 Industry Overview**

With the growth of technology and globalization, more and more people are being connected with each other through the help of the services provided by telecommunications industry that make their life much easier. These services such as phone calls, SMS, voice SMS, Internet etc have become a part and parcel of the lives of people of various age and occupation. For which the telecom industry is one of the largest growing industries in Bangladesh. The industry in Bangladesh is primarily dominated by 4 major telecom operators whom are, Grameenphone, Robi Axiata Limited, Banglalink & Teletalk. The total subscriber count in the country is close to 160 million subscribers and the number has been increasing at a dramatic rate and in 2018 alone it rose around 93.8% from the previous year (Haque,2019). The Global telecommunications market was valued at almost 18 Billion dollars back in 2017 and is expected to grow at the rate of more than 6.1% (Wing, 2019). Moreover, with the growing number of subscribers and advancement of technology such as 5G and more have increased the potential growth of this industry even more which could further increase the growth rate even more in the coming years.

#### **1.2 Company Background**

Robi Axiata Limited is a joint venture between three major companies whom are Axiata Group Berhad, Bharti Airtel Limited & NTT DoCoMo Inc and they are currently the second largest mobile network operator in Bangladesh with over 46.88 million subscribers according to statistics retrieved from the official website of Robi Axiata Limited from December, 2018. The company started their journey in 1997 when the name of the brand was “AKTEL”, later in 2010 they were renamed as “Robi” and they changed their official name to Robi Axiata Limited

and merged with Airtel later in 2016. They were the first company in Bangladesh to launch some key technologies such as 3.5G and currently they offer a variety of services and products which include SMS, GPRS, EDGE, 3.5G, 4.5G, Mobile Banking, SMS banking and many more.

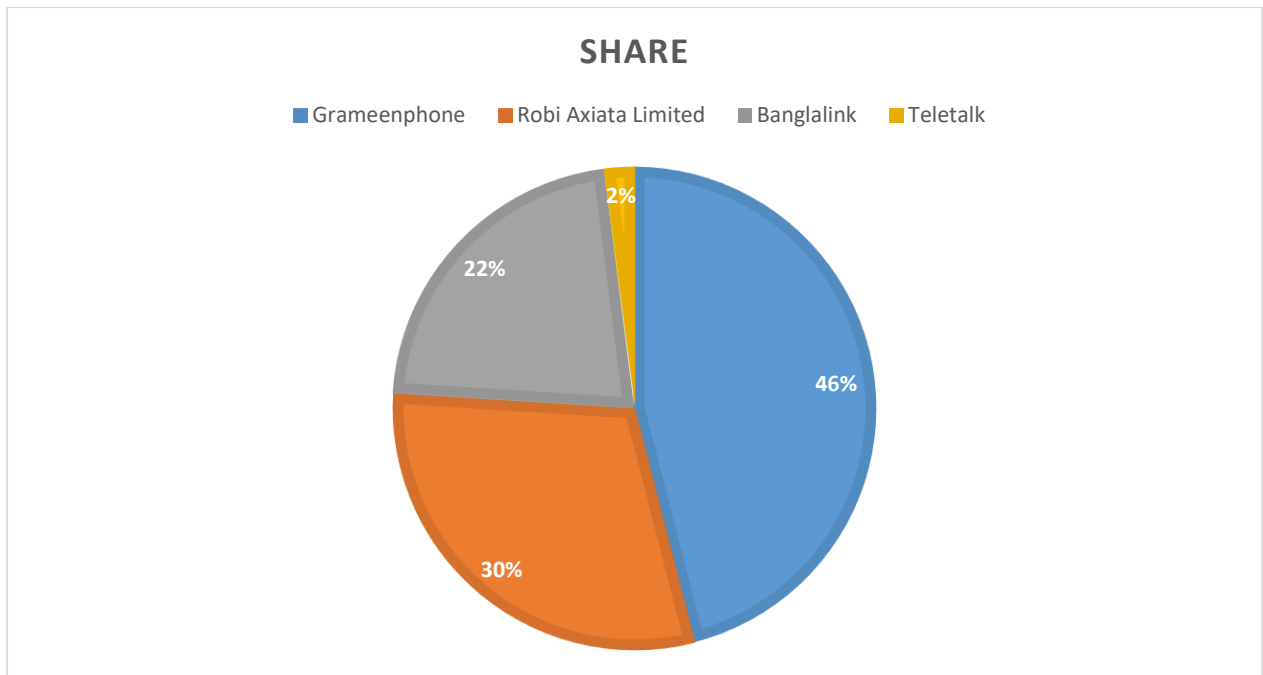

### **1.3 Values and Principles of the Company**

The main values and principles of Robi Axiata Limited include the following,

- ❖ **Being Agile:** They encourage asking questions to gain clarity, learning from failure for future success, seeking trends to spot opportunities and solutions.
- ❖ **Inspire to Innovate:** They encourage in focusing on customers to understand their problems and find out their desires, they innovate to ensure customer satisfaction, they try to create authentic sense of purpose among people.
- ❖ **Collaborate to Deliver:** They focus on demonstrating respect for all they interact with, building trust and transparency around communication, cultivating diversity and inclusion.
- ❖ **Do Digital:** They value taking financial Risk to foster Innovation, learning from failures and Identify learnings for future success, pursuing employee ideas to develop entrepreneurial mindset and more.

### **1.4 Share of the Company withing the Industry**

The Telecom Industry of Bangladesh is dominated by only 4 big companies whom are Grameenphone, Banglalink, Robi Axiata Limited and Teletalk. Out of these companies, Grameenphone holds the majority of the share, followed by Robi Axiata Limited then Banglalink and lastly Teletalk. The shares of the companies are shown in the pie chart below,

*Figure 1: Telecommunication Market Share of Bangladesh in 2019*

The following data has been gathered from EBL Securities Limited (2019)

Robi Axiata Limited is currently the second biggest Telecom company in Bangladesh after the airtel merger and following closely with Grameenphone with the rise of their subscribers each year.

## **Chapter 2**

### **Introduction of The Study**

#### **2. 1 Introduction**

Talent Development is the development of the people whom are capable of making a positive impact on organizational performance either through immediate impact or long-term demonstration of highest potential. (CIPD, 2017:3). Although talent development and management are a widely known concept in business, some researchers say that for more than 60 years it has been a stable scientific concept in business but the meaning of talent management is still ambiguous (Ardakani, 2017). With the advancement of technology and

digitization and the change of job roles frequently, it has been necessary for companies to nurture the high potential employees whom can be agile enough to take the company forward in the long run. Recently there has been a shift in attitude toward the talented people of the organization and they think of the talented individuals as a source of competitive advantage (Nat et. al, 2019). Usually talent can be from within the organization or from outside, usually utilizing the combination of two are the best ways to gather talent for the future (Cappelli, 2008). For this digital age and for technology-based company such as Robi Axiata Limited, managing their talent and developing them for future competitive advantage and source of succession planning has become a huge priority as making the talented employees ready for the future can provide them that edge that can help them become the number 1 company in their sector.

## **2. 2 Objective of the Report**

The primary research objective of this report is to provide recommendations for Robi Axiata Limited regarding talent development and management through the results of this research.

Secondary objective of this report is to benchmark how companies are handling their talent development process and which variables are playing more of a huge role in talent management in this current age.

## **2. 3 Significance of the Report**

The significance of this report can be viewed from 4 different angles,

- ❖ **Academic:** This report can help future researching students or researchers to find out more about the factors that affect talent development and take can use the results to further develop the research.

- ❖ **Corporate:** Companies and use the results to focus on the factors which are more prominent in talent development from the research and utilize them to improve their talent development system if applicable.
- ❖ **Individual:** A person can take a look at this report and find themselves to know a bit about talent development & management and how it can help a company to get competitive advantage over other companies.
- ❖ **Others:** This research may help others in different topics which may be related to talent development and help them related to their research. In addition, it can help generate curiosity regarding talent development for the reader.

## 2. 4 Limitations of the Study

The study was conducted where the sample number was quite low numbering 107 respondents compared to expected, Apart from that the time required for this research was quite low thus enough data was not possible to be gathered.

## Chapter 3

### Literature Review

Talent is a desirable quality in all human beings and different organizations need workers with the right talent that are fit for them, the process of developing this talent is known as talent development in business context. (Ansar & Baloch, 2018). The development of talent and the management of talent has been a focus in Human Resource management quite a lot in recent times because of a few factors such as increased productivity and efficiency, reduced recruitment cost, reduced absenteeism and employee turnover and more as well as being able to take the organization to new levels (Zaman, 2017). This talent can be found from within the organization or from external sources, Talent can be classified into three categories,

- ❖ **Interns:** Internship is a test drive program for talent to various organizations (Chegg, 2019). Not only does interns help to lower recruitment cost, they can be a source of future potential talent as well for the organizations.
- ❖ **Management Trainees:** Management Trainee programs are usually the primary flagship recruitment programs for most organizations. It is widely believed that the young managers of today for an organization will become the future leaders for that particular organization, for which it is crucial for companies to select and develop their management trainees. (Lipman, 2019).
- ❖ **Internal Employees:** Now days it has also been a trend to promote the culture that systematically improve and bring out the talent of their internal working employees whom can be an easy source of talent for the company without a lot of investment done to attract external talent. (Erickson, Moulton and Cleary, 2018)

Through analysis of various reports, it is quite prominent that five independent variables play a significant role in talent development in the modern age which are, “**Coaching & Mentoring**” (Das & Amala, 2016; Rani & Kumar, 2014; Everwise, 2017; Cappelli & Tavis

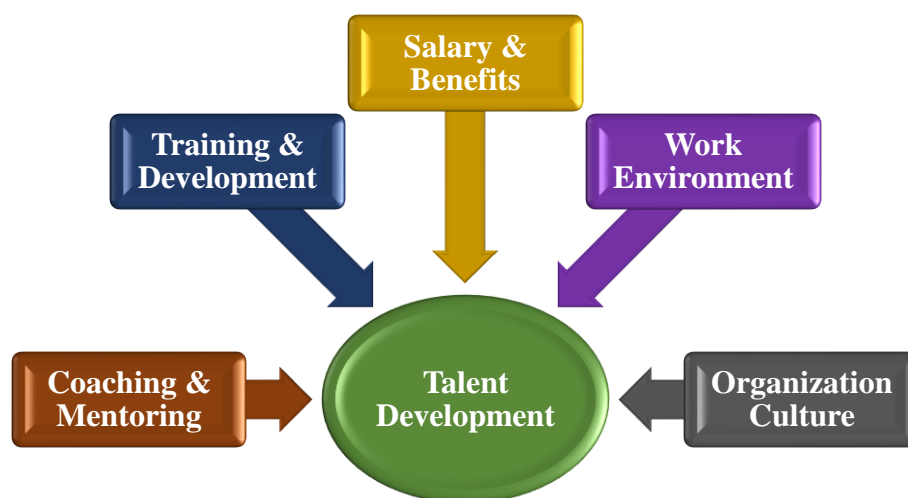

2019); second independent variable is “**Training & Development**” (Das & Amala, 2016; Rani & Kumar, 2014; Everwise, 2017; Ford, Harding & Stoyanova, 2010); the third independent variable is “**Salary & Benefits**” (Elder, 2017; Santos, 2014; Das & Amala, 2016; Rani & Kumar, 2014);The fourth independent variable is “**Work Environment**” (Rani & Kumar, 2014; Das & Amala, 2016; Hagel & Brown, 2013; Machado,2018); Last but not least, the fifth variable is “**Organizational Culture**” (Meng el. Al, 2016; Wright, 2014; Tsai, 2011; Das & Amala, 2016; Rani & Kumar, 2014; Scott, 2019).

## Chapter 4

### Methodology of the Study

#### 4. 1 Theoretical Framework

Through the secondary research, four independent variables were identified to have a significant impact on the dependent variable which is Talent Development, these variables are “Coaching & Mentoring”; “Salary & Benefits”; “Training & Development” & “Organizational Culture”. With the usage of these 4-independent variables, the following model is created where the dependent variable is Talent Development.

*Figure 3: Factors Affecting Talent Development*

**Independent Variables:** For This Research the Independent Variables are,

❖ **Training & Development:** There are several definitions of training and development by various authors and experts. Noe et al., (2006) referred training as a planned effort facilitates the learning of job-related knowledge, skill and behavior by employee. David and Stephen (1989) described training as "A learning experience in that it seeks a relatively permanent change in an individual that will improve his or her ability to perform on the job. In general, training and development is used to help employees learn various skills that can help in their daily work tasks or develop themselves for future. Training is also a key retention factor for talented employees and have increased the retention rate by more than 70% (Eisen, 2005). It can be a key factor that help a talented employee to enhance their talent for the betterment of themselves and the benefit of the organization.

**H1:** The more the training & development opportunities, the higher the chances are for talent development.

❖ **Coaching & Mentoring:** Mentoring is a long-term relationship between two people in a working environment where the mentor helps to meet a development need of the person he is mentoring and helps to uncover the full potential which ultimately benefits the whole organization and the mentor and mentee. (Faure, 2015). While coaching is a short-term objective based process where an employee teaches or guides another employee to attain a certain skill or to complete a specific objective which is clarified by the following definition, Coaching is a solution focused collaborative systematic process which is result oriented where the coach helps increase work performance, life experience, learning and the growth of the coachee. (Grant, 1999). In the modern age, almost 79% millennials consider coaching and mentoring to be an important aspect of

their career development (Everwise, 2017) for which coaching and mentoring can play a crucial role in the development of the talent for any organization.

**H2:** The greater the coaching & mentoring opportunities, the greater the chances are of developing talent.

❖ **Salary & Benefits:** Salary & benefits are usually the considered the most important factor for any employee to pick the organization and research has found out that almost 35% employees are unsatisfied with their job salaries & benefits and are willing to improve their compensation package (Elder, 2017). In addition to salaries, the youth of this generation prefer benefit packages such as flexibility, healthcare and more which helps them to keep motivated and to grow as long as these benefits are secured (Robinson, 2018). The process of linking high performance to compensation or benefits have also been a driving factor for employee engagement and development in modern times (Santos, 2014). All in all, without the financial security and benefit packages, it is quite hard to develop talent in the modern age, for which companies these days are focusing on compensation and appropriate benefit packages for the employees.

**H3:** The higher the salary and benefits, the more opportunities there are for developing talent for any organization.

❖ **Organizational Culture:** Organization culture refers to the beliefs that guides an employee to know what is right to do and what not to do including the company practices, values and assumptions of their work. (Staniland, 1985). The type of organizational culture can help to boost the talent development process significantly for many organizations. Each organization has their own distinct type of culture and the culture may have a substantial effect of the overall talent development process and whether it will improve the results or not. (Davenport et al, 1998). If an organization has a culture of encouraging learning and maintaining positive relations among

consumers, the company can experience the positive sides of talent development steps more frequently than other organizations. (Rose, 2019). In the modern age, organizational culture plays an even bigger role in talent development than before as millennials always like to learn, get feedback for their work & stay engaged for which a culture which promotes this behavior can work wonders for any organization. (McGoff, 2018). These reasons are responsible for why many top multinational companies are focusing on developing their organizational culture more suitable for the best talent development.

**H4:** Favorable organizational culture is necessary for developing talent.

❖ **Work Environment:** Work environment refers to all the surrounding conditions which the employee operates in which includes physiological environment as well as psychological environment. (Johansson, 2019). For millennials and Gen Y, the work environment is one of the top most priorities when looking for their job and for developing themselves from the generations before them. In a research conducted recently on 2013 on 75 companies in various industries, the conclusion was that redesigning work environment will positively benefit a company to increase business performance improvement for the future by promoting growth and development of the people. (Hagel et-Al, 2013).

**H5:** The higher the quality of work environment in an organization, the higher the chances for them to develop their talent to suit their needs.

**Dependent Variable:** For this study, the dependent variable is “**Talent Development**”. Talent Development is the development of the employees whom are capable of making a positive impact on organizational performance either through immediate impact or long-term demonstration of highest potential. (CIPD, 2017:3). For any organization, talent development has become a key part of their human resource department and overall organizational

performance at recent times because it can help improve organizational efficiency and overall performance.

#### **4. 2 Type of Data Used**

Primarily two types were data collected and utilized in this research,

- ❖ Qualitative Data
- ❖ Quantitative Data

#### **4. 3 Data Source**

- ❖ **Primary Source:** Primary data for this research is to be collected through online questionnaire (Google Forms) from the existing talent in the market whom consist of people such as Interns, Management Trainees or even regular employees and the number of the sample was 107 respondents.
- ❖ **Secondary Source:** Secondary data for this research was collected from various articles, journals, books and websites.

#### **4. 4 Data Collection Method**

Data for this research was primarily collected through the questionnaire which was distributed to various talent whom are working in organizations and students whom are currently doing internship or are in their last semesters through social media by providing them with the google form link. The secondary research data was collected through various online media, articles, journals from trusted sites.

#### **4. 5 Statistical Treatment of the Data**

Primarily two software were used during the analysis of data. IBM SPSS software was used in most cases, apart from that excel was used to create certain tables and pie charts within the report.

## Chapter 5

### Analyses and Interpretation of Data

#### 5. 1 Demographics of The Survey:

The survey was conducted on employees and students whom are either currently enrolled or are already doing jobs or looking for jobs. Various demographic data were collected from where the results are given below,

**Question:** Where are you enrolled or where did you finish your latest degree from?

From this question, the data of where they were last enrolled or are enrolled were collected and the data was collected from various universities all across Bangladesh where the majority students were from Dhaka area.

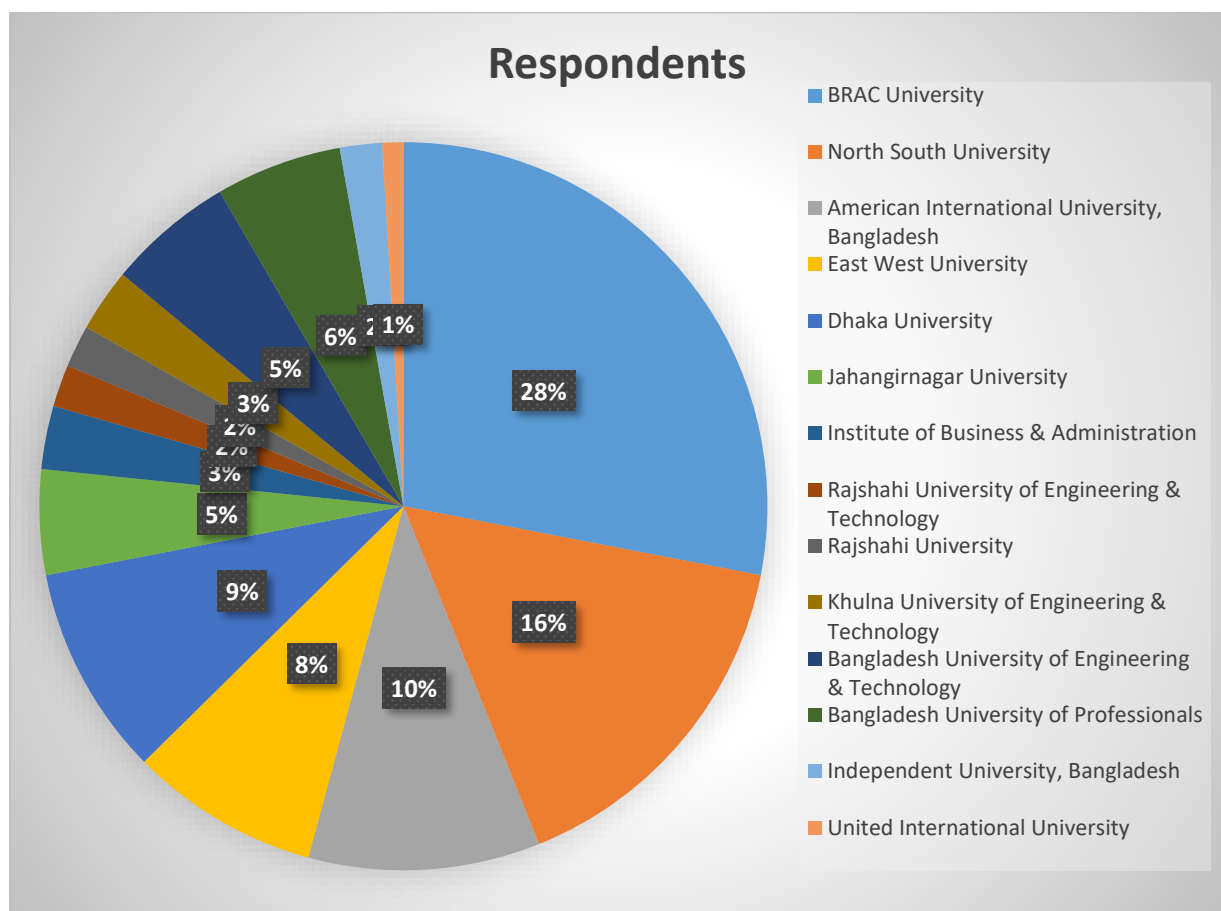

Figure 4: Respondents of the Survey

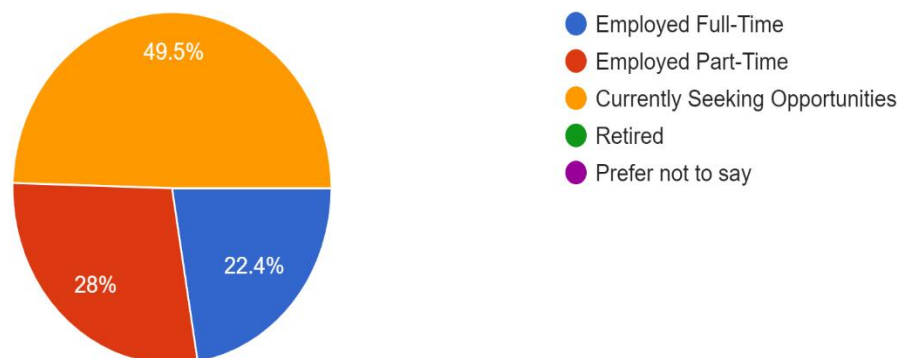

From the respondents, 30 were from BRAC University, 17 people were from North South University, 9 were from East West University, 11 respondents were from American International University, 10 respondents were from Dhaka University and the rest of them were from the other universities all across Bangladesh.

**Question 2:** What is your current employment status?

When asked about the current employment status, almost half of the respondents were either employed full time or part time. The other half were mostly looking for opportunities thus unemployed at the moment or are enrolled in the university.

What is your current employment status?

107 responses

*Figure 5: Employment Status of the Respondents*

From the results, 49.5% of the respondents were currently seeking opportunities while the rest 55.5% were either employed part time or full time.

**Question 3: What is your Gender?**

What is your Gender?  
107 responses

*Figure 6: Gender of the Respondents*

The Survey consisted of 43 Female and 64 Male respondents totaling to 107 respondents.

**Question 4: What is your age group?**

What is your age group?  
107 responses

*Figure 7: The Age Group of the Respondents*

The majority of the respondents were from the age group ranging from 23-27 Years of age while there were 11 respondents from the age group 18-22 and 5 respondents from the group ranging from 28-32 years of age.

**Question 5:** What is your highest educational degree?

What is your highest educational degree?  
107 responses

*Figure 8: The highest Educational Degree of the Respondents*

96 of the respondents had an undergraduate degree only while 11 of the respondents had postgraduate degrees among the respondents of the survey.

**5. 2 Analysis of the variable: Talent Development**

**Question 6:** Continuous Development opportunities are necessary not only for senior management but also for all employees in general.

**Statistics**

Continuous Development opportunities are necessary not only for senior management but also for all employees in general.		
N	Valid	107
	Missing	0
Mean		1.62
Median		2.00
Mode		1
Std. Deviation		.709

## 5. 12 Results and Discussion of the Analysis

Through the research, for all of the variables we found out different results after the analysis. When analyzing about the dependent variable “**Talent Development**” we found out that almost 93.5% percent of people believe that continuous development opportunities are vital for all employees regardless if they are considered talent or not as almost 97.2% believe that it can help a company gain a competitive edge and can help groom talent or bring out talent whom can be used for succession planning purposes thus almost 98.1% of the respondents believed or are neutral that talent development is currently a necessity for any company to flourish.

**Coaching & Mentoring:** When analyzing the Independent Variable “Coaching & Mentoring”, out of the 107 respondents, 85 of the respondents agreed that they feel safer and learn more from working under a coach or a mentor and almost 80.4% of the 107 respondents believe that coaching & mentoring is mandatory to bring out the best out of the employees. However, majority of the respondents did not agree to the fact that coaching & mentoring are a good alternative to classroom training for developing talent but majority almost 74.8% of them agreed to the fact that learning a specific skill is easier with the help of a coach or mentor.

**Training & Development:** Analyzing the variable “Training & Development” the results showed that 95.3% respondents believe new technical skills and software training is necessary for all employees not just for the employees whom are from technical backgrounds or work in

the technical side of business. In addition, 96.3% of the respondents believe that suitable training & development cannot help bring out hidden talent among the employees. An overwhelming majority of the respondents also believe that basic training on software such as Excel and word are not enough for this current age and all of the 107 respondents believe that it is necessary to provide them training & development opportunities to become digitally ready for the future.

**Salary & Benefits:** While analyzing the variable “Salary & Benefits” it was quite astonishing to know that a huge number of the respondents did not prioritize salary and benefits to be one of their top priorities while looking for a job. In fact, almost 51.4% respondents did not consider it as one of their top priorities or are neutral to the factor. However, 96 of the total 107 respondents wanted to switch jobs if they get paid less than the industry standard salary. In addition, suitable benefit packages are quite important to the respondents as almost 92.5% considered these benefits necessary for their personal and career development and almost 89.7% agreed to the fact that they would be doing more for the organization if they were getting their favored benefit packages.

**Organizational Culture:** Analyzing the “Organizational Culture” variable it is quite certain that the majority of the talent are concerned about the culture of an organization and 93.5% of them consider it as a top factor in joining an organization and 98 of them believed that a learning based culture is one of the most important factors for fresh graduates and interns. 90.7% of the respondents also preferred a culture where they could approach anyone for any help rather than a seniority-based culture and lastly 86.9% of them agreed that it is quite vital for brining out the talent and making them loyal towards the organization.

**Work Environment:** The last independent variable is “Work Environment” and the respondents provided quite interesting responses for the questions for this variable. 106 out of the 107 respondents prefer an organization which provides working closely with a team and

communicating than working in a solitary environment. Almost 4 out of 5 respondents considered the physical environment of the office as a top priority for joining while almost 20% of them did not focus much on the exterior nor the physical environment. However, almost all of the respondents agreed that the quality of equipment is quite important for the learning and development of any employee. In addition, almost all of the respondents considered the workplace safety as a big necessity in this current timeline.

**Factor Analysis:** KMO & Bartlett's test results show it is at 0.652 which means that it is acceptable and the Chi-Square here is that 165.758 and is distributed while significance is .000 which implies that it is significant. Thus, the variables are significantly correlated.

**Model Summary:** From the Analysis, the model summary shows that the model is quite significant. In addition, the R square value indicates that the independent variables Training & Development, Coaching & Mentoring, Organizational Culture, Salary & Benefits and Work environment helps explain 48.8% of the variance in the dependent variable.

**Anova Table:** The overall regression model was significant as the values from anova table are,  $F(5, 101) = 19.242$ ,  $R \text{ square} = .488$

**Coefficients:** the results show that two variables play a significant impact on the dependent variable which are, "Training & Development" ( $b=0.570$ ,  $p=.000$ ) & "Organizational Culture" ( $b=0.171$ ,  $p=0.096$ ) while the other variables were not so significant in this case as they had beta's which were in the negative and also the p values were not as significant as these two variables. Here training & development is quite significant while organizational culture is not as significant however it has a significance level quite lower than the other three variables.

**Results from the Reliability Analysis:** The reliability analysis shows that the Cronbach's Alpha for this research is 0.722 which refers that the variables are reliable as Cronbach's alpha is  $> 0.7$ .

## Chapter 6

### Summary of the Findings, Recommendations & Conclusion

**6. 1 Summary of the Findings:** From the results of the analysis it is quite certain how the independent variables relate to the dependent variable. For this model 48.8% of the change in variance of the dependent variable can be explained through the independent variables. Here, two of the 5 independent variables stand out from the others which are, “Training & Development” ( $b=0.570$ ,  $p=.000$ ) & “Organizational Culture” ( $b=0.171$ ,  $p=0.096$ ) and from these two training & development is the most significant variable for this research. Which means that suitable training and development opportunities and positive organizational culture can promote talent development and the null hypotheses for these two variables are to be accepted which suggests that Favorable organizational culture is necessary for developing talent and the more the training and development opportunities, the higher the chances are for talent development. On the other hand, the other variables are not as significant for talent development from the research.

**6. 2 Recommendations:** From the findings of the research, some of the key recommendations would be,

- ❖ Providing training in topics and software that are going to be used instead of current software such as excel, word, PowerPoint.
- ❖ Provide technical training at least at the basic level or higher level to employees from all backgrounds so that they would know the business functions better in the digital age.
- ❖ Give training & development opportunities to tap into the potential of each employee to try to bring out hidden talent which can ultimately give the company a competitive edge by developing these talents and by saving cost by not needing to hire external talent.

- ❖ Provide practical based training opportunities more than classroom lectures, for example, using VR to teach about new relevant topics which could be costly but ultimately can be worth the investment if it is implemented properly to develop their talent.
- ❖ Create a culture of positivity that would be relevant all the time thus increasing the learning potential of the talent of the company instead of occasionally hosting events to promote the culture.
- ❖ Promote a learning-based culture where learning would be the primary focus and encouragement for the employees and talent.
- ❖ Promote classroom training/ Practical training mixed with a bit of coaching & mentoring to nurture the talent and unlock their full potential rather than focusing on one or the other.
- ❖ Revisit the benefit packages and providing opportunity to the talent to choose what suits them the best. Instead of giving similar benefits to all, give them customized packaging scope as millennials respond more to freedom when it comes to choosing what they like.
- ❖ Highlight or create growth opportunities in the company. For example, if a certain skill is valued more, set a standard which talented individuals can reach which would help them grow and go even further as well as benefiting the company.
- ❖ Invest quite heavily in culture, instead of hosting few events here and there, design the culture in such a way that would encourage team work, peer- to- peer feedback as well as recognition.
- ❖ Increase the monetary non-monetary rewards and recognition for achievements instead of the salary.

- ❖ Aligning training with managerial operation goals thus giving such training that are good for the management related goals as well as the development of the employees.

These are some of the recommendations that can provide benefits to the talent development process.

### **6. 3 Limitations of the Study**

There were certain limitations to the research, some of the notable ones include,

- ❖ Due to lack of the time research could not be more informative as it was not possible to do extensive study related to the topic.
- ❖ This research only had 5 independent variables for the dependent variable, if there were more variables used, this research would have been even more accurate.
- ❖ Sample size of the research was only 107 respondents, if there were more respondents, it could have been even more informative and accurate.
- ❖ The data collection method although effective was not the best way to get in depth information regarding the variables such as taking personal interviews or other methods.

### **6. 4 Further Studies**

From the research's results there are further study opportunities. For example, when we asked the respondents if they think coaching & mentoring can be an alternative to classroom training majority of them disagreed or were neutral, so a research can be done regarding - Benefits of coaching & mentoring compared to classroom training. Moreover, further studies can be made using this data of which type of training and development methods do the talent of this age prefer whether it be classroom training, practical training or even digital learning and their effectiveness.

## **6. 5 Conclusion**

Talent development is quite an important part of the human resource department in this current timeline as it can be a source of competitive advantage. In this digital age, proper utilization and development of talent can be the key factor that separates one company from their competitors and help them go to the next level. Focusing on proper training & development through effective methods as well as having a learning oriented positive organizational culture can contribute to the quality and speed of the talent development process of any organization which can help them flourish with internal talent in the coming years.

## Appendix

### Academic Questionnaire for Internship Report

#### Demographic Questions:

1. Which of these following positions are you working for or are most interesting to you? \*

- Internship
- Management Trainee
- Entry Level Jobs

2. What is your current employment status? \*

- Employed Full-Time
- Employed Part-Time
- Currently Seeking Opportunities
- Retired
- Prefer not to say

3. What is your Gender? \*

- Male
- Female

4. What is your age group? \*

- 18-22
- 23-27
- 28-32
- 33 or above

5. What is your highest educational degree? \*

- Undergraduate
- Postgraduate

#### “Questions Related to Dependent Variable: Talent Development”

6. Continuous Development opportunities are necessary not only for senior management but also for all employees in general. \*

- Strongly Agree
